- High system integration adopts Delta's IE5 MSI SynRM for better efficiency, stability, and energy savings

Lower Harmonics

Effective Harmonic Suppression

- Adopts lower harmonic technology to effectively suppress harmonics without an extra reactor*
- The lowest harmonics can reach THDi Min. 35%, much better than EN 61000-3-12 standard (THDi < 48%)

PdM

Predictive Maintenance (PdM)

Early maintenance notification for power module, capacitor, and cooling fan to allow replacement before end of service life and prevent sudden downtime

Enhanced PCB Coating

Enhances PCB Coating and Corrosion Resistance Capacity

- In workshops, materials such as oil, gas, dust or corrosive chemicals might spread over on the PCB through the heat-dissipating hole of the drive. With long-term changes in the temperature and humidity, the effects may corrode the PCB and further deteriorate components
- VP3000 helps strengthen the PCB coating and is compliant with the IEC 60721-3-3: 3C3 standard, which extends the lifespan of the drive operating in harsh environments or under corrosive gas exposure (e.g., salt mist, SO₂, O₃, H₂S, and more)
